Functionality description

Solution

1. **Use SAP Business One 8.82 PL00 - PL10**
 - SAP Crystal Reports 2008 Runtime SP5 (version: 12.5.0.1190)
 - SAP Crystal Reports for SAP Business One (version: 12.5.0.1190)
 - In these versions, SAP Crystal Reports 2008 SP5 for SAP Business One is supported.
2. **Use SAP Business One 8.82 PL11 - PL15 or SAP Business One 9.0 PL04 - PL08**
 - SAP Crystal Reports runtime engine for .NET Framework 4 (version: 13.0.4.705)
 - SAP Crystal Reports for SAP Business One (version: 13.0.4.738)
 - In this SAP Business One version, editing in CR Designer 2008 or importing it into or exporting it from SAP Business One, still works as expected. However, editing in it from SAP Business One by clicking *Edit* from *Report and Layout Manager* does not work, as the reports must be opened by default using CR 2011, even when CR Runtime 2011 is installed.

SAP Crystal Reports Integration Package and SAP BusinessObjects BI platform .NET SDK Redistributable:

- Installing these two components enables the SAP Business One connection and add-ins option in CR designer. This enables interaction between CR and SAP Business One.
- Before updating them, remove the original versions from the Control Panel.
- Make sure that you always install SAP Crystal Reports Integration Package from the SAP Business One version of the same Installation or Upgrade package. This will automatically install the SAP Business Objects BI platform .NET SDK Redistributable with compatible version.

Note:

- If you have an unmatched CR runtime or CR designer installed, it may cause a shutdown in designer or other preview/print issues within SAP Business One. Make sure that the version matches.
- To make sure that the supported version of CR for SAP Business One is in use; you may need to uninstall SAP Business One client and re-install it. Make sure that you **restart** the OS after uninstalling the client.
